3

1   Abstract of the Disclosure

2   A programmable thermostat having a touch screen liquid crystal display in which

3   the power consumption of each heating/cooling component and the energy costs in the

4   locality are entered by a user in order that the thermostat's control program can, upon

5   demand, calculate and display the heating/cooling costs accrued beginning with a user-

6   specified starting date.
